The Mustang first offered a 351-cubic-inch small-block V-8 in 1969. Known as the 351 Windsor—for Ford's Windsor, Ontario, engine plant—it was more than a longer-stroke version of the 302, using a different block and firing order. Offered in two- and four-barrel carburetor versions, the Windsor was a solid

Ford 351 Windsor V8 Engine. The Ford 351 Windsor was first introduced in 1969 and was quite a breakthrough in regards to the ways Ford produced its V8 engines. When Ford introduced the 302 to replace the 289 the engines were very similar and even used the same pistons. The 351 Windsor was in a league of its own because of its heightened deck block, larger connecting rods and much “beefier” main bearing caps.
