Block Diagram Chemical Engineering

A block flow diagram (BFD) is a drawing of chemical processes used to simplify and understand the basic structure of a system suggested by Peters & Timmerhaus, in 2003. A BFD is the simplest form of the flow diagrams used in the industry. Blocks in a BFD can represent anything from a single piece of equipment to an entire plant.

Block Flow Diagram Guide for Modeling Chemical Processes

A block flow diagram (BFD) is a drawing of a chemical processes used to simplify and understand the basic structure of a system. A BFD is the simplest form of the flow diagrams used in industry. Blocks in a BFD can represent anything from a single piece of equipment to an entire plant. For a complex process, block flow diagrams can be used to break up a complicated system into more reasonable principle stages/sectors.

A diagram is a symbolic representation of information using visualization techniques. Diagrams have been used since ancient times on walls of caves, but became more prevalent during the Enlightenment. Sometimes, the technique uses a three-dimensional visualization which is then projected onto a two-dimensional surface. The word graph is sometimes used as a synonym for diagram.

Block Flow Diagrams BFDs provide an overall view of the process, generally on a single sheet of paper, with each major operating step represented by a block. BFDs are used primarily for training people who are not familiar with the unit. They are also useful for conceptual safety studies because they provide a good overview of the process.
