Watch the "Check Engine" light on the dash. Once the sequence has been initiated, the "Check Engine" light begins to flash. Each flash represents a number in a two-digit trouble code stored in the computer. A pause separates the first digit from the second digit. For instance, the code "23" flashes as follows: flash, flash, pause, flash, flash, flash.

Run within five seconds. It does not always work the first time. (Run is JUST before Start). The code will show up in the odometer - thank your lucky stars for this, since the codes used to get blinked on the engine light. Alan Borgolotto noted that "if you do it too quickly it doesn't work (got to wait to see the odometer light up" and that if you have no codes, the odometer will say "done."

### **Chrysler PT Cruiser computer codes - PTCruizer.com**

Many of us have had fault codes pop up on our screen while riding or while trying to start our bike. These codes point the Spyder techs in the right direction to start looking for a problem. As a owner you can also retrieve these codes as I've shown in the video below. The codes don't mean much unless you can decipher those codes. Below is a link to the codes in pdf form that will help you ...

## **Spyder Fault Codes - Lamonster Garage**

If you drive a JEEP Wrangler JK, you can check engine fault codes by inserting the key into the ignition and turning it 3x to the run position without starting the vehicle. Turning the key 3x tells the OBD (On Board Diagnostics) computer there has been 3 bad runs with the same error and it throws out a code on the instrument panel.

## **Jeep Wrangler Check Engine Light Reset - 4WheelDriveGuide**

The OBD system monitors numerous vehicle sensors and reports any faults to the vehicle's computer. When a fault is detected, the problem is recorded as a trouble code in the computer and the Malfunction Indicator Light is illuminated. The Malfunction Indicator Light, also known as the "check engine light," lets you know that a problem has occurred and a trouble code has been stored to help identify the problem.

To query and OBD-I-era computer for these codes, put the key in the ignition and turn the key to run (not start), then off, then run, then off, then run (that's 3 runs and 2 offs). Leave the key in the run position. The check engine light will turn on for a few seconds, then turn off, then (sometimes after 20-30 seconds) start flashing.

## **Diagnostic Trouble Codes - [Jedi.com](http://Jedi.com)**

When it runs into an issue that the ECU cannot correct, the check engine light (CEL) starts glowing. The light is typically yellow or orange, and features an image of engine with text telling the driver to check or service the engine or powertrain. The engine computer stores a diagnostic code when the light begins glowing.
