commonly used for analysis of three-phase electrical power systems. The voltage or current of a three-phase system at some point can be indicated by three phasors, called the three components of the voltage or the current. This article discusses voltage, however, the same considerations also apply to current.

In this paper we study cosmological solutions of the $f(T, B)$ gravity using dynamical system analyses. For this purpose, we consider cosmological viable functions of $f(T, B)$ that are capable of reproducing the dynamics of the Universe. We present three specific models of $f(T, B)$ gravity which have a general form of their respective solutions by writing the
