Sun and Earth - The Universe Today

The Sun is a star.

There are lots of stars, but the Sun is the closest one to Earth. It is the center of our solar system. The Sun is a hot ball of glowing gases. It keeps our planet warm enough for living things to thrive. It gives us light so we can see. Eight planets move around the Sun. We call that

of about 149 million km (93 million miles).

The Earth is constantly spinning like a top around its axis, and it takes one day for it to complete a spin. This spinning is what causes the Earth's day and night cycle. The Earth is travels around the sun in an oval-shaped orbit.
